Alcohol-Involved Fatalities	2386	2607	2412	2543	2754	2510	2509	2382	2048	1832	1569
% of Total Fatalities	52.2	52.2	48.9	48.7	50.1	46.6	46.6	46.0	44.1	43.8	37.7
Alcohol-Involved Injuries	60699	67835	29999	92869	68816	65033	63937	63847	55779	48969	42936
% of Total Injuries	22.9	21.9	20.7	20.1	19.1	18.2	17.6	17.5	15.9	14.5	13.6

These totals were reported by the Department of Justice, Law Enforcement Information Center, and include a small number of duplicates (0.8% in 1993).

²For the years 1984-93, a DMV master file count of the number of DUI abstracts received (by year of violation) is used, minus duplicates. These totals do not include conviction abstracts not yet received. Thus, for the most recent years, these figures will substantially underestimate the final conviction totals. For 1983, the data are based on DMV S&R Report totals, proportionally adjusted by the 1984-1991 differences between the S&R Report and the annual DUI abstract totals.

These data include a projected number of abstracts not yet received. This number is based on an empirically derived function of the court abstract reporting rate.

⁵Fotal mandatory susp/ rev exceeds the number of DUI arrests because many offenders receive both an APS and postconviction susp/ rev action. ⁴These totals were taken from the DMV annual S&R reports and include late reporting of convictions from prior years.

^rRevised from prior reports.

HIGHLIGHTS OF 1995 CALIFORNIA DUI-MIS REPORT

- DUI arrests continued to decline in 1993 (-10.3%), and have dropped by over 36% since 1990.
- Alcohol-involved traffic fatalities decreased again in 1993 (-14.4%), declining each year since 1987 (-43% overall).
- The number of persons injured in alcohol-involved accidents during 1993 declined (-12.3%) for the seventh consecutive year, resulting in a 38.6% reduction in alcohol-involved injuries over the 7-year time period.
- 11.1% of all 1992 DUI arrests were associated with a reported traffic accident. 51.5% of these accidents involved an injury or fatality.
- The average blood alcohol concentration (BAC) of a convicted DUI offender was .166% in 1992 (the same as for 1991), which is down from .176% in 1989, but still more than double the California illegal per se BAC limit of .08%.
- Almost 1 million license suspension or revocation actions have been taken since the administrative per se (APS) law was enacted in July 1990.
- Among 1993 DUI arrestees, Hispanics (46.6%) again constituted the largest racial/ethnic group, and were arrested at a rate over double their adult population parity (22.5%, 1990 Census).
- Hispanics (45.2% of 1992 DUI arrests) are the only racial/ethnic group that is underrepresented in alcohol-involved accidents (42.1% of total, and 39.2% of fatal and injury, arrest-related accidents).
- The average age of a DUI offender is 32.6 years. Less than 1% of arrested DUI offenders are juveniles (under age 18).
- Among convicted DUI offenders in 1992, 67.5% were first offenders and 32.5% were repeat offenders (one or more prior convictions within the previous 7 years). The

proportion of repeat offenders has decreased slightly each year since 1989, when it stood at 37%.

- 19.2% of 1992 DUI arrest cases did not show any corresponding conviction on DMV records. This rate is up from 18.6% in 1991, a proportional increase of 3.2%. (It should be noted that these cases occurred prior to the 1993 DUI-MIS report, which identified the problem of DUI convictions not appearing on driver records. Any subsequent system improvements which would reduce the number of nonrecorded DUI convictions would not begin to appear until 1993 DUI arrests were tracked).
- Alcohol treatment, in conjunction with license restriction, was the most effective postconviction sanction in reducing subsequent DUI incidents among DUI offenders.
- License suspension was the most effective postconviction sanction in reducing the total accident risk of DUI offenders. Beginning in July 1990, virtually all DUI offenders were suspended upon arrest under the new administrative per se law. With the imposition of preconviction APS suspensions, the postconviction total accident rates of treatment program participants, who would not have been suspended prior to 1990, was reduced toward that of the suspended groups.
- Jail, in the absence of treatment or postconviction suspension, was the least effective sanction for first offenders in terms of both DUI recidivism and subsequent accident risk.

ACKNOWLEDGMENTS

The authors acknowledge with appreciation the many individuals who have contributed to the success of this project. In particular, we wish to acknowledge the cooperation of the Department of Justice, Statistical Analysis Center, in providing annual DUI arrest data and documentation. The contributions of Debbie McKenzie, Staff Services Analyst, in transforming mainframe computer files into readable data tables and figures, as well as her general assistance in the production of this report, are acknowledged with appreciation. We also would like to acknowledge the contributions of Patrice Rogers, Research Analyst II, William C. Marsh, Research Program Specialist II, and Pat Timmons, Staff Programmer Analyst, the administrative direction and report review efforts of Raymond C. Peck, Chief, Research and Development Section, and the coordination of the final report production by Seresa Hartwell, Management Services Technician.

INTRODUCTION

This report is the fourth Annual Report of the California DUI Management Information System, produced in response to Assembly Bill 757 (Friedman), Chapter 450, 1989 legislative session (see Appendix A). This bill required the Department of Motor Vehicles (DMV) to "establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted" of DUI in order to provide "accurate and up-to-date comprehensive statistics" to enhance "the ability of the Legislature to make informed and timely policy decisions." The need for such a data source had long been documented by numerous authorities, including the 1983 Presidential Commission on Drunk Driving. In responding to this legislative mandate, this report combines and cross-references DUI data from diverse sources and presents them in a single reference. Data sources drawn upon include the California Highway Patrol (CHP) for accident data, Department of Justice (DOJ) for arrest data, and the DMV driver record database. Each of these reporting agencies, however, initially draw their data from diffuse primary sources such as individual law enforcement agencies (arrest and accident reports) and the courts (abstracts of conviction).

The general conceptual design of the California DUI management information system (DUI-MIS) is presented in Figure 1. The basic theme of the DUI-MIS is to track the processing of offenders through the DUI system from the point of arrest and to identify the frequency with which offenders flow through each branch of the system process (from law enforcement through adjudication to treatment and license control actions). Figure 1 also illustrates the relationship between offender flow and data collection at each point of the process. The initiating data source for the DUI-MIS is the DUI arrest report, as compiled by the DOJ Law Enforcement Information Center's Monthly Arrest and Citation Register (MACR) system.

Another major objective of this report is to evaluate the effectiveness of court and administrative sanctions on convicted DUI offenders. This is accomplished by examining the postconviction recidivism records (alcohol/drug-related accidents and traffic convictions) of offenders assigned to alternative sanctions, as detailed in the section on "Postconviction Sanction Effectiveness."

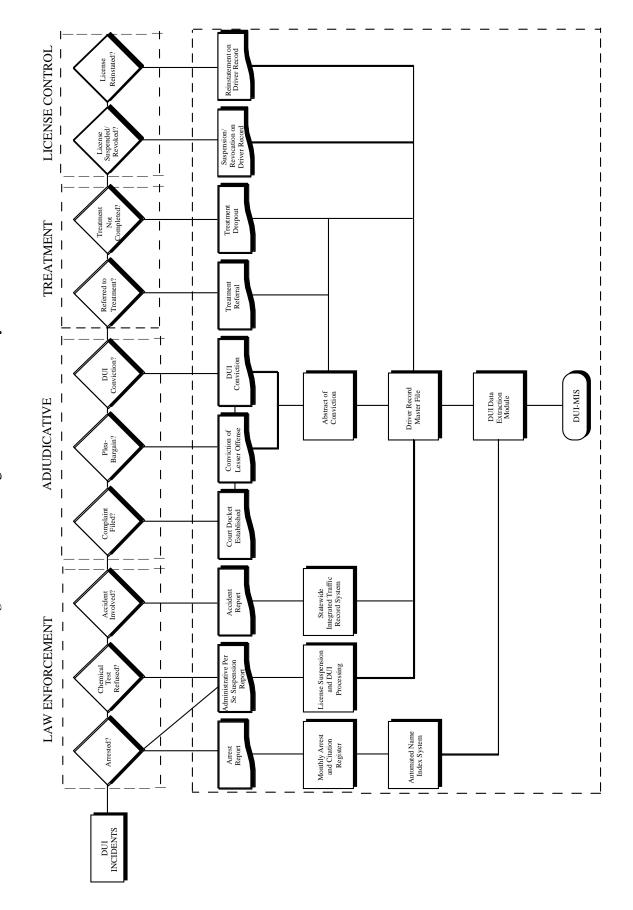

Figure 1. DUI management information system.

It should again be noted that it is not an objective of this report to interpret, analyze or make recommendations based on the data presented. Rather, the primary purpose of a reporting system such as the DUI-MIS is to provide objective data on the operating and performance characteristics of the system for others to assess in making policy decisions, formulating improvements and conducting more in-depth evaluations.

An example of how this process can work is provided by local and state agency response to the 1993 DUI-MIS report, which included a section on the tracking of "nonconvicted" DUI arrestees. In response to the identified problem of DUI convictions not being reported or updated to the offender's driver record, the Riverside County District Attorney organized a task force of representatives from law enforcement, the courts, public policy groups, the press, state administrative agencies and the legislature, to address the situation in Riverside County. The involvement of state legislative representatives led to the development of a statewide proposal on behalf of the Business, Transportation and Housing Agency to improve the overall integrity of DUI and other traffic conviction data on the driver record database. Representatives of major components of the DUI system, including law enforcement, the courts, prosecutors, and administrative agencies, met in Sacramento during February 1994 to discuss potential improvements in the tracking of DUI offenders. Some of these potential improvements have been incorporated into a current departmental legislative proposal to require the reporting to DMV of all DUI disposition information, including cases not filed, failures-to-appear in court, bench warrants and acquittals. department also recently (October 1994) released a Request for Proposal (RFP) to develop an "audit" procedure for tracking DUI cases which do not appear as convictions on DMV driver records.

It is exactly this feedback process of problem identification, proposed solution and reevaluation which the DUI-MIS was designed to engender. The success of the California DUI-MIS has contributed to a national initiative to design a model DUI reporting system, currently being developed under contract to the National Highway Traffic Safety Administration (NHTSA).

SECTION 1: DUI ARRESTS

The information presented below on DUI arrests is based primarily on data collected annually by the Department of Justice (DOJ), Law Enforcement Information Center, Monthly Arrest and Citation Register (MACR) system. These data are the most current nonaggregated data available on DUI arrests.

<u>Table 1: DUI Arrests By County and Annual Percentage Change from 1991-1993.</u> The number of DUI arrests by county for the years 1991-1993 and the percentage changes from 1992 to 1993 are shown in Table 1.

<u>Table 2: 1993 DUI Arrests by County and Type of Arrest.</u> This table shows a breakdown of 1993 DUI arrests by felony, misdemeanor and juvenile arrest type, by county. This table also shows county and statewide DUI arrest rates per 100 licensed drivers.

<u>Tables 3a-3b: 1993 DUI Arrests by Age, Sex, and Race/Ethnicity.</u> Table 3a crosstabulates age by sex and age by race/ethnicity of 1993 DUI arrestees statewide. The same tabulations by county are found in Appendix Table B1. Table 3b shows the same data crosstabulated by sex and age within race/ethnicity.

Figure 2 below displays the trend in DUI arrests from 1983 to 1993.

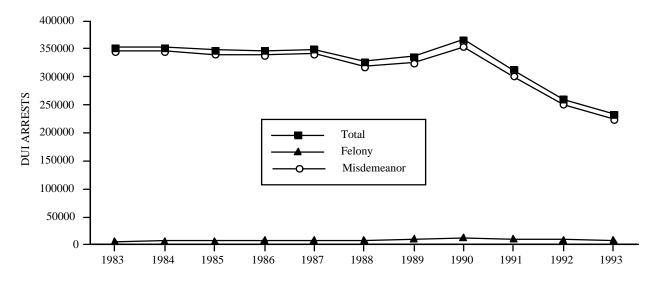

FIGURE 2. DUI ARRESTS 1983-1993.

Based on the data shown in Figure 2 and Tables 1, 2, 3a and 3b, the following statements can be made about DUI arrests in California:

Statewide Parameters:

- DUI arrests decreased by 10.3% in 1993, following a 16.1% decline in 1992. Since 1990, DUI arrests have dropped by over 36%.
- The DUI arrest rate decreased to 1.1 per 100 licensed drivers in 1993, compared to rates of 1.3 in 1992, 1.5 in 1991, and 1.8 in 1990.
- Felony DUI arrests (involving bodily injury or death) constitute a relatively small proportion (3.7% in 1993) of all DUI arrests.

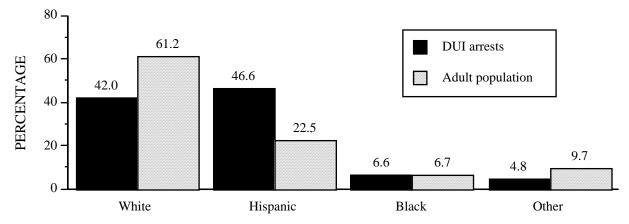

County Variation:

- 25% of all 1993 California DUI arrests occurred in Los Angeles County. Five counties (Los Angeles, Orange, San Diego, Santa Clara, and San Bernardino) had over 10,000 DUI arrests each, and accounted for almost half (49%) of all arrests.
- The 1993 county per capita DUI arrest rates ranged from 0.4 to 6.8 DUI arrests per 100 licensed drivers. Eight counties had rates below 1.0: San Francisco (0.4), Contra Costa (0.7), Nevada (0.8), and Alameda, Orange, Shasta, Solano and Tuolumne (0.9). Fifteen counties had rates of 2.0 or higher and of these, 5 had rates higher than 2.5: Imperial (2.9), Colusa (2.8), Kings and Sierra (2.7), and Inyo (2.6). The extremely high rate for Alpine (6.8) must be viewed with caution because of the extremely small population size of Alpine County (N = 800 licensed drivers in 1993).
- Most counties again showed a decline in DUI arrests in 1993. Among the larger counties, the greatest decline occurred in Orange County (-18.9%). Among other counties, the largest decreases in DUI arrests occurred in San Francisco (-28.7%), Inyo (-28.1%), Calaveras (-24.6%), and Glenn (-22.9%) counties. Among counties showing increases in DUI arrests were Sierra (31.4%), Plumas (29.9%), Sutter (23.0%) and Mariposa (22.7%).

<u>Demographic Characteristics:</u>

The average age of a DUI arrestee in 1993 was 32.6 years. Half of all arrestees were age 30 or younger and 80% were age 40 or younger. Less than 1% of all DUI arrests involved juveniles (under age 18). 2% of all arrestees were age 61 or older.

- Males comprised 88.4% of all 1993 DUI arrests.
- Among 1993 DUI arrestees, Hispanics (46.6%) continued to be the largest racial/ethnic group, and were arrested at a rate over double their adult population parity (22.5%, 1990 Census). All other racial/ethnic groups were underrepresented among DUI arrestees, including Whites (42.0% of arrests, 61.2% of the population), Blacks (6.6% of arrests, 6.7% of the population) and Others (4.8% of arrests, 9.7% of the population). The percentage of Hispanic DUI arrestees (46.6%) has increased substantially since 1991 (40.4%), while that of White DUI arrestees (42.0%) has decreased substantially compared to 1991 (49.9%). It should be noted, however, that the absolute numbers of DUI arrests among all racial/ethnic groups declined in 1993, with Hispanics declining at a slower rate than other groups. Figure 3 below shows the percentages of 1993 DUI arrests and 1990 Census adult population by race/ethnicity.
- Among male 1993 DUI arrestees, 50.2% were Hispanic, 38.5% were White, 6.5% were Black and 4.9% were "Other." Among female DUI arrestees, 68.6% were White, 19.3% were Hispanic, 7.3% were Black, and 4.8% were "Other."
- In 9 counties, Hispanics comprised over 60% of those arrested for DUI during 1993: Tulare (75.3%), San Benito (70.5%), Fresno (70.2%), Madera (68.7%), Imperial (67.2%), Kings (65.3%), Monterey (64.8%), Merced (63.7%), and Los Angeles (62.8%). In most other counties, the majority of arrestees were White.
- The average age of a DUI arrestee varied considerably by race: Blacks were the oldest with a mean age of 35.2 years, while Hispanics were the youngest, with a mean age of 30.1 years.

<u>Figure 3</u>. Percentage of 1993 DUI arrests and adult population by race/ethnicity.

SECTION 2: CONVICTIONS

Data on convictions resulting from court adjudication of DUI arrests are reported directly to the Department of Motor Vehicles (DMV) on court abstracts of conviction. The following tables compile and crosstabulate these conviction data by demographic, geographic and adjudicative categories.

<u>Table 4: 1992 DUI Convictions by Age and Sex.</u> This table crosstabulates statewide DUI conviction information by age and sex. Corresponding county-specific conviction data are presented in Appendix Table B2.

<u>Table 5: Matchable 1992 DUI Convictions by Age, Race/Ethnicity and Sex.</u> This table displays DUI conviction information by age, race/ethnicity and sex. "Matchable" DUI convictions are those which are traceable to a DUI arrest appearing on the MACR system. Because not all arrests could be matched to an existing record, these conviction totals underestimate the total number of actual convictions.

<u>Table 6: Adjusted 1992 DUI Conviction Rates and Relative Likelihood of Conviction, by Age and Race/Ethnicity.</u> This table shows the relative probability of a DUI arrest leading to a DUI conviction, by age and race/ethnicity. DUI conviction totals from categories in Table 5 ("matchable DUI convictions") were increased by the proportion which matchable convictions constituted of "total DUI convictions," shown in Table 7, to arrive at the adjusted DUI conviction rates.

Table 7: Total Conviction Data for 1992 DUI Arrestees. This table portrays county and statewide DUI-related conviction data as reported to the DMV on court abstracts of conviction. Corresponding court-specific data are shown in Appendix Table B3. Convictions not reported to DMV are considered nonconvictions for the purposes of this report. Actual nonconvictions include cases where the DUI arrest was not filed, not prosecuted, or resulted in a not guilty verdict. The DUI conviction rates by county were calculated by comparing the county conviction totals with DOJ arrest totals. Because not all 1992 DUI arrests have yet been adjudicated, these conviction totals and rates will slightly underestimate the "final" figures. The DUI conviction rates shown in the "DUI Summary Statistics: 1983-1993" table at the very beginning of this report include an estimate of these late convictions, and thus are slightly higher than those shown in Tables 7 and 8. Conviction variables include felony and misdemeanor DUI convictions,

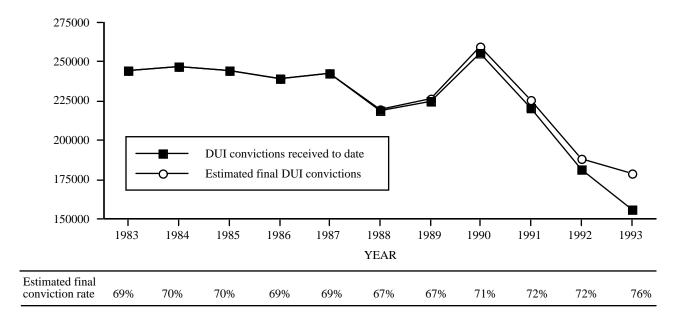

alcohol- and nonalcohol-related reckless driving convictions, convictions of "other" lesser offenses and DUI dismissals. DUI arrest dates from the DOJ MACR system were matched to driver record violation dates to identify nonalcohol-related reckless driving and "other" convictions. The average (mean) adjudication time lags from DUI arrest to conviction, and from conviction to update on the DMV database, were calculated for each county.

Table 8: Adjudication Status of 1992 DUI Arrests by County. This table shows the adjudication status (court disposition) of 1992 DUI arrests, by county. Included are the percentages of arrests which have resulted in DUI convictions (misdemeanor or felony), reckless driving convictions (alcohol-related or nonalcohol-related), convictions of "other" offenses, or no reported conviction, as of the date of writing. Again, because not all 1992 DUI arrests have yet been adjudicated, these rates will slightly underestimate the "final" rate for each category, excepting the category "no record of any conviction," which will be slightly reduced (approximately 1-2%) by the eventual adjudication of these few late cases.

<u>Table 9: 1992 Reported Blood Alcohol Concentration (BAC) Levels of DUI Convictions.</u> This table shows the frequency of reported BAC levels for DUI convictions. BAC levels are reported on about half of all DUI abstracts of conviction received by DMV from the courts.

<u>Table 10: 1992 DUI Convictions by Offender Status and Average Reported BAC Level</u>. This table displays the proportions of convicted DUI offenders by offender status (number of prior convictions), and the average (mean) BAC level and standard deviation (a measure of variability) associated with each offense level.

Figure 4 (below) shows, for the years 1983 to 1993, the number of DUI abstracts received to date by DMV from the courts, the estimated final number of DUI convictions which will ultimately be received, and the estimated final DUI conviction rate.

Note: Estimated DUI convictions = see footnote to "DUI Summary Statistics: 1983-1993."

<u>Figure 4</u>. DUI abstracts received by DMV and DUI conviction volume and rate estimates, 1983-1993.

Based on these data, the following statements can be made:

Statewide Adjudication Parameters:

- The estimated DUI conviction rate increased from 72% in 1992 to 76% in 1993.
- Among 1992 DUI arrests, 70% have resulted to date in DUI convictions (felony or misdemeanor). This is approximately the same DUI conviction rate as for corresponding 1991 arrests.
- 8.6% of 1992 DUI arrests have resulted in reckless driving convictions, with 15% of these not correctly reported as alcohol-related. Both of these rates are essentially the same as the corresponding 1991 rates.
- 2.3% of 1992 DUI arrests have resulted in convictions of offenses other than DUI or reckless driving, as compared with 2.5% such "other" convictions in 1991.

- 19.2% of 1992 DUI arrests have not yet resulted in any conviction on DMV's records, compared to 18.6% in 1991. As additional cases are adjudicated and reported by the courts, this figure will decrease slightly. (It should be noted that these cases occurred prior to the 1993 DUI-MIS report, which identified the problem of DUI convictions not appearing on driver records. Any subsequent DUI system improvements which would reduce the number of nonrecorded convictions would not begin to appear until 1993 cases were tracked).
- The average reported BAC level of all convicted DUI offenders in 1992 was 0.166%, more than double the illegal per se BAC limit of 0.08%. This figure is the same as in 1991, and is down from the 0.176% BAC average reported for 1989 DUI convictions.
- Among 1992 convicted DUI offenders, 67.5% were first offenders, 21.8% were second offenders, 7.3% were third offenders and 3.4% were on their fourth or more offense. (The statutorily defined time period for counting priors in California is seven years.) The proportion of repeat offenders (32.5%) among all convicted DUI offenders has decreased slightly each year since 1989 (at which time 37% of all convictions were repeat offenses).
- The average adjudication time lags were 2.6 months from DUI arrest to conviction and 2.9 months from conviction to update on the DMV database, totalling 5.5 months from arrest to update on the offender's driving record. These time lags were slightly shorter than in 1991.

Variation by County:

- Among the larger counties, 1992 DUI conviction rates varied from highs of 83.3% in Ventura County, 81.6% in Santa Clara County, and 80.8% in Kern County, to lows of 57.8% in Fresno County, 61.5% in San Bernardino County, and 62.9% in Riverside County. Los Angeles County, which accounted for over 25% of all DUI arrests in the state, had a DUI conviction rate of 67.8%.
- Among the smaller counties, 1992 DUI conviction rates varied from highs of 82.7% in Nevada County and 82.3% in El Dorado County, to a low of 27.1% in Yolo County. In Mariposa County in 1992, there were more reported DUI convictions than arrests, resulting in a "conviction rate" of 132%. (A substantial number of federal DUI arrests made at Yosemite National Park are not reported to the DOJ

MACR system, however. The addition of these nonreported arrests would substantially reduce the conviction rate for Mariposa County.)

- The rates at which DUI arrests were plea-bargained to alcohol-related reckless driving convictions varied from over 30% in Mariposa County to 0% in Marin and Ventura counties.
- The percentage of DUI arrests that were improperly adjudicated as nonalcohol-related reckless driving convictions varied from 0% to 7.3%. Six counties had rates of 5% or more: Mono, Amador, Del Norte, Sierra, Calaveras and Imperial.
- The percentage of DUI arrests adjudicated as minor convictions ("other" convictions) varied from 0% to 4.2%. Los Angeles (4.2%) and San Luis Obispo (4.0%) had rates of 4% or more.
- In six counties, the proportion of arrestees not showing a conviction of any offense exceeded 30%. These counties were Yolo, Trinity, Imperial, Tulare, Fresno and Merced. Four counties had nonconviction rates of 10% or less: Mariposa, Mono, Nevada and Yuba.

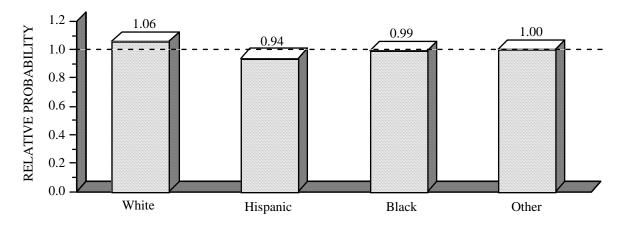

Variation by Court:

- As was true for prior years, the 1992 superior court time lags were generally longer than municipal court time lags, presumably due to the type of DUI case (felony) being adjudicated.
- Municipal court time lags from arrest to conviction (for courts with more than one reported conviction) varied from a high of 5.5 months in the Covelo (Mendocino County) court to a low of 0.7 months for the Little Lake (Mendocino) court.

Demographic Characteristics:

- The average age of a convicted DUI offender in 1992 was 33.0 years.
- 48.6% of 1992 DUI convictees were aged 30 years or younger and 79.6% were 40 years or younger.
- Females comprised 12.1% of all 1992 convicted DUI offenders, compared to 12.2% in 1991, 11.7% in 1990, and 11.4% in 1989.

• The racial/ethnic distribution of 1992 DUI convictions (White = 46.1%; Hispanic = 42.8%; Black = 6.3%; Other = 5.0%) generally paralleled that of 1992 arrests, although Whites were somewhat more likely, and Hispanics somewhat less likely, to be convicted of the offense (as shown in Figure 5 below).

<u>Figure 5</u> . Relative likelihood of conviction by race/ethnicity.

TABLE 10: 1992 DUI CONVICTIONS BY OFFENDER STATUS AND AVERAGE REPORTED BAC LEVEL

DUI OFFENDER STATUS	PERCENT	AVERAGE BAC LEVEL (%)	STANDARD DEVIATION
STATEWIDE	100.0	.166	.052
1ST DUI	67.5	.162	.049
2ND DUI	21.8	.174	.055
3RD DUI	7.3	.181	.058
4TH+ DUI	3.4	.175	.065

SECTION 3: POSTCONVICTION SANCTIONS

Data on court sanctions assigned to convicted DUI offenders were taken from DUI abstracts of conviction for offenders arrested in 1992. Also included are counts of postconviction DMV license actions for selected offender groups, while total counts of all license actions, including Administrative Per Se (APS) license suspensions and revocations, are shown in the Administrative Actions Section. APS actions (effective July 1990) are initiated by law enforcement immediately upon arrest for DUI, and are administered independent of the criminal adjudication process. This section includes the following tables:

<u>Table 11: 1992 DUI Court Sanctions by DUI Offender Status</u>. This table shows the frequency of specific court sanctions statewide by number of prior DUI convictions. The specific court sanctions tallied include percentages of probation, jail, alcohol treatment programs (first offender, SB 38 second offender, and 30-month third offender programs), license restriction, court suspension, and ignition interlock. Crosstabulations of sanctions by county, court and number of prior convictions appear in Appendix Table B4.

<u>Table 12: 1992 DUI Sanction Combinations by County - First Offenders</u>. This table displays the frequency of commonly assigned court sanction combinations (such as first offender alcohol program plus license restriction) by county for first DUI offenders. License suspensions include both court and DMV postconviction (non-APS) suspensions. The sanction combination groups portrayed in this table, as well as Table 13, were defined according to the conventions described in the "Evaluation Methods and Results" portion of the "Postconviction Sanction Effectiveness" section.

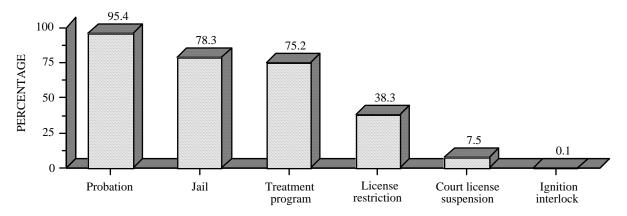

<u>Table 13: 1992 DUI Sanction Combinations by County - Repeat Offenders</u>. This table shows the frequency of commonly assigned court sanction combinations by county for second, third and fourth (or subsequent) DUI offenders. License actions include both court and DMV postconviction (non-APS) license suspensions and revocations.

From the data in these and the Appendix tables, it is evident that the use of alternative sanctions varied widely by county, court and offender status in 1992. For example:

Statewide Parameters:

• The most frequently applied court sanction among all convicted DUI offenders was probation (95%), while the least frequently used court sanction was ignition interlock (0.1%). DUI offenders were sentenced to jail in 78% of the cases. (However, in many jurisdictions, jail is often served as community service rather than actual jail time.)

Figure 6 (below) graphically displays the statewide data from Table 11 showing the frequency of specific types of court-ordered sanctions among all convicted DUI offenders.

<u>Figure 6</u>. Frequency of court-ordered DUI sanctions (1992).

County Variation:

- The proportion of first DUI offenders sentenced to jail varied by county from less than 12% in Marin and Inyo counties to close to 100% in Calaveras, Lake, Lassen, Modoc, Shasta, Stanislaus, Sutter, Tehama, Tulare, Tuolumne, and Ventura counties.
- Counties such as Calaveras, Lassen, San Luis Obispo, San Mateo, Sierra, Solano, Tuolumne, and Yolo preferred to assign first offenders to treatment program and jail (over 85%) rather than treatment program and license restriction (less than 7%). Marin and San Bernardino were among counties that assigned treatment program and jail to less than 1% of their first offenders. Humboldt, Inyo, Marin, and Orange counties assigned treatment program and license restriction to over 75% of first offenders.

• Counties departing from using typical first offender sanction combinations were Riverside, San Bernardino, Imperial, and Santa Barbara, as shown by relatively high percentages (over 10%) in the "other" category. ("Other" includes license restriction without treatment program assignment, probation only, and other unofficial sanction combinations.)

Court Variation:

• In Los Angeles County, two municipal courts (Lancaster and Burbank) used jail as a sanction in more than 90% of their DUI sentences. At the other extreme, four courts (Culver City, Santa Monica, Malibu and Torrance) used jail as a sanction in less than 40% of their DUI sentences.

<u>Variation by Offender Status</u>:

- 70% of 1992 first DUI offenders were sentenced to jail, compared to 96% of all repeat offenders.
- 83% of first DUI offenders were assigned to alcohol treatment programs, along with 75% of second offenders, 34% of third offenders and 17% of fourth or more DUI offenders. (All repeat offenders, however, must eventually complete specified alcohol treatment programs in order to be eligible for license reinstatement.)
- 10% of first DUI offenders and 28% of second DUI offenders received DMV or court license suspensions after adjudication. As of July 1990, of course, all DUI offenders with BAC levels of 0.08% or more were subject to 30 days to one-year administrative license suspension/revocation under the APS law.

TABLE 11: 1992 DUI COURT SANCTIONS BY DUI OFFENDER STATUS*

DUI OFFENDER STATUS	TOTAL	PROBATION	JAIL	1ST OFFENDER ALCOHOL PROGRAM	SB 38 ALCOHOL PROGRAM	30-MONTH PROGRAM	LICENSE RESTRICTION	COURT SUSPENSION	IGNITION INTERLOCK
		%	%	%	%	%	%	%	%
STATEWIDE	180786	95.4	78.3	55.7	19.3	0.2	38.3	7.5	0.1

2ND DUI	39440	96.3	95.5	7.7	67.2	0.1	60.3	9.9	0.1
3RD DUI	13269	91.0	96.0	3.8	28.9	1.5	12.9	19.9	0.3
4TH+ DUI	6134	64.3	96.2	2.9	13.8	0.2	3.2	12.6	0.1

^{*}Entries represent percentages of 1992 DUI convictees receiving each sanction by offender status. Sanctions within each offender status group (row) are not independent; therefore, row percentages always add to more than 100%. Percentages of sanctions by county and court appear in Appendix Table B4.

SECTION 4: POSTCONVICTION SANCTION EFFECTIVENESS

This section presents and describes the results of an evaluation assessing the effectiveness of court and administrative sanctions applied to first and second DUI The effectiveness of alternative sanctions is evaluated in terms of postconviction driving record as measured by: 1) total accidents, and 2) DUI incidents, including alcohol-involved accidents, major convictions (primarily DUI, also reckless driving and hit-and-run), APS (0.08% BAC or chemical test refusal) suspensions and DUI failure-to-appear notices (FTA). Displayed below in Figures 7-15 are failure proportions from the sanction analyses for 1989, 1991 and 1992 first and second offenders, grouped by sanction assignment (the 1990 offenders were not included as noted below). These figures show the proportion of accident- or DUI incident-involved drivers following their conviction. They are followed by a narrative description of the evaluation design, subject selection, data collection, analytical procedures and evaluation results. The reader is cautioned that license suspension refers to postconviction suspensions only, and does not include preconviction administrative per se license suspensions (which are applied to all offender groups).

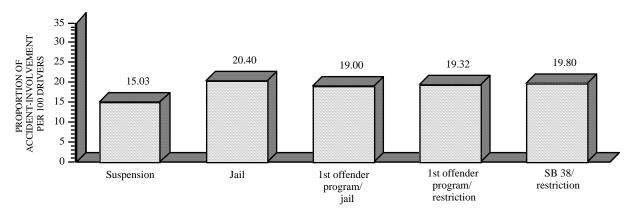

Based on the data represented in Figures 7-12, the following conclusions can be drawn about first offender sanctions:

- The 1989, 1991 and 1992 suspended first offender groups all had fewer accidentinvolved drivers than did any other first offender sanction group.
- First offenders assigned to first offender treatment programs plus license restriction in 1989, 1991 and 1992 had significantly fewer DUI incidents in the postconviction period than did any other first offender sanction group.
- In all three years, first offenders sentenced to jail without treatment or postconviction suspension had a significantly greater proportion of DUI incident-involved drivers in the postconviction period than any other first offender sanction group. The 1991 and 1992 jail-sanction first offender group also had the poorest record of accidents over the 2-year and 1-year postconviction periods, respectively.

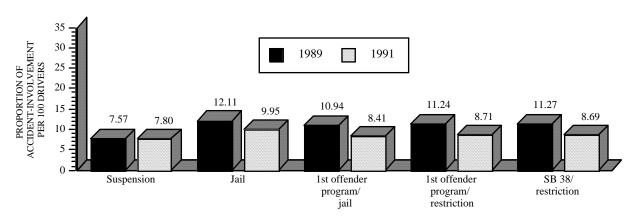

¹ Third or more offenders were not included because a previous study (Tashima & Marelich, 1989) indicated serious confounding due to group differences on prior interventions. In addition, sanctions for third and subsequent

offenders do not vary much, due to the statutorily prescribed sanction requirements.

27

<u>Figure 7</u>. Adjusted 4-year accident rates of 1989 first offenders by type of sanction.

<u>Figure 8</u> . Adjusted 2-year accident rates of 1989 and 1991 first offenders by type of sanction.

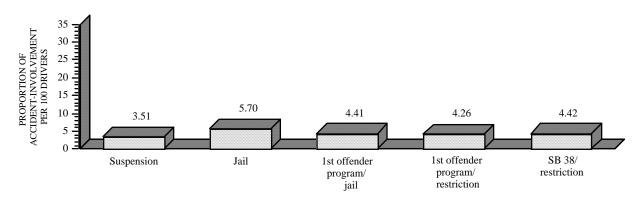

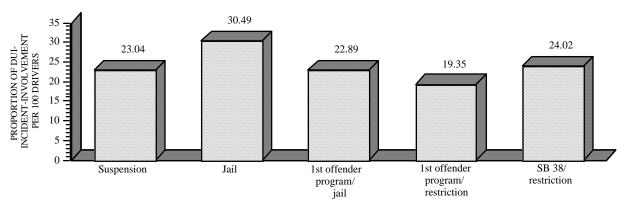

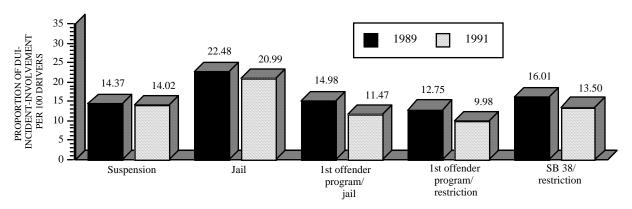

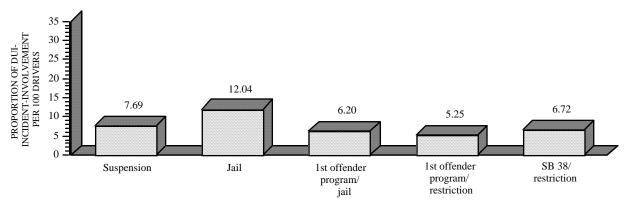

Figure 9 . Adjusted 1-year accident rates of 1992 first offenders by type of sanction.

<u>Figure 10</u>. Adjusted 4-year DUI incident* rates of 1989 first offenders by type of sanction (*alcohol-related accident or violation).

<u>Figure 11</u>. Adjusted 2-year DUI incident* rates of 1989 and 1991 first offenders by type of sanction (*alcohol-related accident or violation).

<u>Figure 12</u>. Adjusted 1-year DUI incident* rates of 1992 first offenders by type of sanction (*alcohol-related accident or violation).

Based on the data represented in Figures 13-15, the following conclusions can be drawn about second offender sanctions:

- The 1989 and the 1991 suspended second offender groups had 20.1% and 16.6% fewer accident-involved drivers than did the SB 38 program groups over their respective (4-year, 2-year) postconviction periods.
- Contrary to prior California studies including the 1992 DUI-MIS report, second offenders suspended in 1992 do not have significantly lower total accident rates than do those assigned to SB 38 treatment programs.
- In all three years, second offender groups sentenced to the SB 38 program plus license restriction had a significantly lower proportion of DUI incident-involved drivers than did the suspended group. At the end of four years, the 1989 suspended group had 22.7% more DUI incident-involved drivers than did the SB 38 program group, while at the end of 2 years, the 1991 suspended group had 42.9% more, and at the end of one year, the 1992 suspended group had 46.8% more, reoffending drivers than did the SB 38 program group.

In addition, findings from the analysis comparing the 2-year driving records of 1989 versus 1991 drivers showed the following:

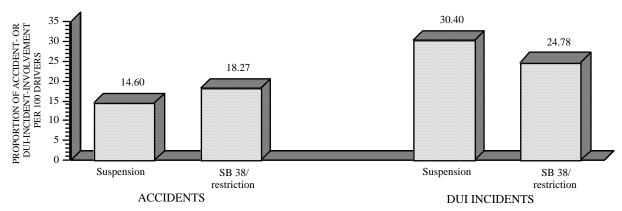

• 1989 first and second offenders had a significantly higher proportion of drivers involved in accidents and DUI incidents than did their counterpart 1991 offenders.

EVALUATION METHODS AND RESULTS

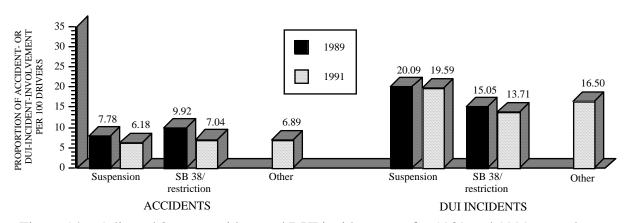

Subject Selection and Data Collection

Convicted DUI offenders were identified from monthly abstract update tapes which contain all DUI conviction data reported to DMV by the courts. In the present study, follow-up data from three sets of offenders were evaluated for sanction effectiveness:

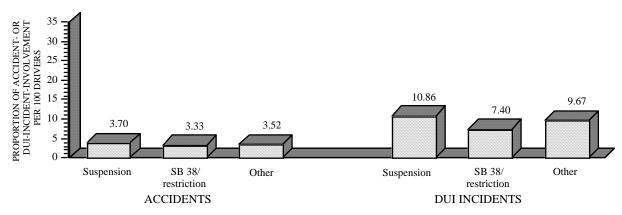

- 1) A 4-year follow-up period for the convicted 1989 DUI offenders who were evaluated in the first DUI-MIS report (the 2-year follow-up period of 1989 offenders was also evaluated in comparison with the 2-year records of 1991 offenders).
- 2) A 2-year follow-up period for convicted 1991 offenders who were evaluated in last year's DUI-MIS report.

<u>Figure 13</u> . Adjusted 4-year accident and DUI incident rates for 1989 second offenders by type of sanction.

 $\underline{Figure~14}$. Adjusted 2-year accident and DUI incident rates for 1989 and 1991 second offenders by type of sanction.

<u>Figure 15</u>. Adjusted 1-year accident and DUI incident rates for 1992 second offenders by type of sanction.

3) A 1-year follow-up period for convicted DUI offenders who were arrested for DUI in 1992.

For each year's annual DUI-MIS report, an additional year of DUI data is added to the sanction analyses. In order to simplify the reporting of an increasing number of analyses, the 1990 DUI offenders were not included in this year's evaluation (the 1990 results were reported in the last two evaluations). Another factor in excluding the 1990 group was that only half of the sample was selected (those cited for DUI between July - December, 1990) because the APS law was implemented in July 1990. The 1991 and subsequent data provide more complete information on the possible effects of APS implementation.

The conviction date in all cases was considered to be the "treatment date" for defining prior and subsequent driving record data, because the penalties and sanctions for the DUI conviction are typically effective as of that date.

Since DUI penalties and sanctions are enhanced as a function of the number of prior DUI and alcohol-related reckless driving convictions within the previous seven years, subjects were selected based on the number of such convictions within the seven years prior to their entry DUI arrest. For the 1989, 1991 and 1992 drivers, two groups were selected for this evaluation: 1) first DUI offenders—drivers who had no DUI or alcohol-related reckless driving convictions within the previous seven years, and 2) second DUI offenders—drivers who had one DUI or alcohol-related reckless driving conviction within the previous seven years.

Court sanctions are reported to and recorded by DMV in the form of disposition codes on the abstract of conviction. A convicted DUI offender, especially a first offender, might receive any one of many combinations of individual sanctions, including jail, fine, license restriction or suspension, alcohol treatment program, or probation. Therefore, in defining sanction combination groups for the purpose of this analysis, the following conventions were used for first offenders:

- 1) if suspension (non-APS) was one of the sanctions imposed by DMV or the court, then the offender was included in the suspension group;
- 2) if suspension (non-APS) was not imposed, but the offender was assigned to an alcohol treatment program, then the offender was included in one of the treatment

groups, according to the type of treatment program (first offender or SB 38) and whether they were also sentenced to license restriction or jail; and

3) if neither suspension nor treatment was imposed, but the offender was sentenced to jail, then the offender was included in the jail group.

Fine and probation are generally imposed on most DUI offenders (except that probation is not usually granted to court-suspended first offenders), and for that reason are not included as sanctions evaluated in this report.

It should be noted that the definition of the sanction combination groups was not an arbitrary analytical convention, but rather a reflection of the most common naturally occurring sanction combinations assigned by the courts. Based on the above taxonomy, five first-offender sanction combination groups are used in this analysis: 1) license suspension, 2) jail, 3) first offender treatment program plus jail, 4) first offender treatment program plus license restriction, and 5) SB 38 (second offender) treatment program plus license restriction (some courts assign this sanction to a small number of first offenders).

One limitation of the above hierarchical grouping scheme is that it does not allow for an evaluation of the independent and interactive effects of each sanction as a treatment factor. Taking first offender treatment program plus jail as an example, the approach we used does not allow analysis of the separate effects of jail from the effects of the treatment program.

The second-offender sanction groups used in the analysis are: 1) license suspension, 2) SB 38 treatment program plus license restriction, and 3) a third group of 1991 and 1992 second offenders ("other") who did not meet the selection criteria of groups 1 or 2. Most of the offenders in this third group were originally referred to an SB 38 treatment program, but were initially suspended as well, in many cases due to court misreporting of disposition codes and/or the offender's lack of compliance with required procedures (e.g. provide proof of insurance, program enrollment, pay fees, etc.). Even if the courts amend the mistaken abstracts of convictions, the offenders still need to meet the insurance and program enrollment requirements. The final sanctions received by this group are unclear, which makes interpretation difficult. The "other" group was not included in the first DUI-MIS 1989 analysis and, therefore, was not included in subsequent reanalyses of the 1989 arrestees.

DUI offenders with felony convictions, chemical test refusal suspensions, 'X' license numbers (assigned if no California driver license number can be found), out-of-state ZIP Codes, and irregular or unofficial sanction codes (among first offenders) were excluded from the sanction analyses.

Prior driver record data were extracted for the two years preceding an offender's DUI conviction date for the 1989 and 1991 offenders and one year prior to the conviction date for the 1992 drivers (due to the more stringent purge criteria of DMV driver records). Appendix Tables B5, B6, and B7 list these prior driver record variables, which were used as covariates in the analyses. The evaluation period for the postconviction driving measures, starting from the conviction date, was four years for the 1989 drivers, two years for the 1991 drivers, and one year for the 1992 drivers. A buffer period of six months was allowed between the end of the evaluation period and the data extraction date to allow for processing and reporting the most recent data to DMV. DUI offenders who had less than the full follow-up time period (from conviction date to the buffer period) were excluded. The outcome driving measures consisted of: 1) total accidents, and 2) DUI incidents (alcohol-involved accidents, major convictions, APS/refusal suspensions, or DUI failures to appear).

Evaluation Design and Analytical Procedures

Logistic regression analysis was used to evaluate the accidents and violations that occurred during the study period by comparing the proportion of accident- and DUI incident-involved drivers in each sanction group at the end of the evaluation period. An additional analysis was conducted comparing the 2-year follow-up driving records of 1989 and 1991 subjects for the purpose of evaluating the decline in alcohol arrests and accidents over these time periods. Only the first accident or DUI incident or "failure" was evaluated. This is not an important limitation with these data because the incidence of repeat failures (two or more accidents or DUI incidents) was low over the study time window. More importantly, analysis of repeat failures would be subject to confounding by court sanctions received in connection with the first failure incident. This type of confounding is avoided because multiple incidents were not included in this analysis.

Since it was not possible to randomly assign drivers to the various sanction groups, potential biases due to preexisting group differences were statistically controlled by entering into the analyses as covariates biographical data, 2-year prior driving record data, and ZIP code indices (accident and traffic conviction averages of each driver's ZIP code area, and selected ZIP code variables from the 1990 census data for the 1991 and

1992 drivers). (Tables B5, B6 and B7 show significant group differences on most of these variables.) While this "quasi-experimental" design is subject to a number of limitations in assessing cause-effect relationships, the statistical control of group differences removes at least part of the bias in group assignment and provides a more precise estimate of the relationship between type of sanction and subsequent record. It is likely, of course, that the groups also differ on characteristics not measured by, or reflected in, the covariates. The possibility of uncontrolled biases becomes particularly problematic if sanctions are commonly received by atypical offenders through self- or judicial-selectivity (e.g., drivers of higher socio-economic status might be more likely to receive probation than those of lower status).

In all of the analyses for accidents (except 1991 first offenders and 1992 second offenders) and DUI incidents for both first and second offenders in all three years, several significant (p < .01) covariate by sanction interactions were evident (statistical significance at p < x means that a differential effect between groups would occur by chance less than x% of the time). These significant interactions indicated that the relationship between the covariates and the outcome measure varied across sanction groups, and therefore the covariates were included in the initial analyses for all three data sets to determine the magnitude of the interactions. In all analyses except two (1989 first offender and 1991 second offender accidents) where sanction differences were significant (at p < .03 for first offenders and p < .06 for second offenders), the interaction effect was generally one-fourth or less that of the main effect of sanction (chi squares were divided by their respective degrees of freedom to provide an approximate measure of effect size). Since the sanction main effect had substantially greater magnitude than the interaction effects, conclusions about sanction differences were based on analyses that did not include the interactions. The interaction effects of the remaining two analyses were examined and found not to create a serious impact on the sanction main effect.

Results of the First Offender Sanction Evaluation

<u>Total Accidents</u>: Figures 7, 8 and 9 and Table 14 display the results of the logistic regression analysis of total accidents for 1989, 1991 and 1992 first offenders. In all three years, the suspended first offender group continued to have the significantly lowest proportion of accident-involved drivers relative to the other sanction groups, with 14.15 (1989), 7.80 (1991) and 3.51 (1992) accident involvements per 100 drivers (see Table 16 for a summary of significant results by sanction groups). First offenders assigned to jail had the significantly highest accident rate of all the sanction groups for 1991 and 1992. However, this finding was not evident among the 1989 first offenders, four years after

their conviction. (It should be noted that the jail sanction may actually be less aversive than other sanctions when community service is substituted for jail time, which is frequently the case.) The failure rates of the other three groups were not significantly different from each other in all three years. Based on the results shown above, suspension continues to show the strongest effect among first offenders in reducing total accidents regardless of the length of time in the evaluation period, while jail was the least effective sanction among all first offenders in 1991 and 1992.

<u>DUI Incidents</u>: Figures 10, 11 and 12 and Tables 14 and 16 show that among the first offender groups in 1989, 1991 and 1992, the (statistically significant) lowest proportions of reoffending drivers were in the groups assigned to first-offender treatment program plus license restriction, with failure rates of 19.35, 9.98 and 5.25 per 100 drivers, respectively. In contrast, the worst recidivism rates occurred with the jail groups for all years (30.49, 20.99, and 12.04 for 1989, 1991 and 1992, respectively). Differences in failure proportions among the other three sanction groups were not significant for the 1989 offenders, but were significantly different among the three groups in 1991 and 1992. The first offender treatment program with jail and the SB 38 participants in 1991 and 1992 had lower recidivism rates than that of the suspension group. Overall, participation in the first-offender treatment program with license restriction ranked first in its effect on DUI incidents, while the jail sanction had the least impact.

Results from the first offender sanction analyses on DUI incidents continue to replicate those from previous research studies. Sanction group differences on accidents in this year's analyses were also consistent for 1989, 1991 and 1992, in contrast to one of the findings from last year's analyses where there were no significant differences among the 1990 sanction groups (two year follow-up period). It was suggested in last year's report that the lack of significant differences between sanction groups on accidents may have been attributable to the impact of the implementation of APS in July 1990, resulting in the nonsuspended groups having accident rates similar to those of the suspended group. This supposition is explored in a present analysis (discussed below) of differences between the 2-year accident and DUI-incident rates for sanction groups identified both before and after the introduction of APS. The effectiveness of APS is also currently being evaluated by DMV Research under a separate contract with the Office of Traffic Safety. The final report on the general deterrent effect of APS will be completed by September 1995.

TABLE 14: FIRST OFFENDER SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF ACCIDENT- INVOLVED, PER 100 DRIVERS	NUMBER OF DUI- INCIDENT- INVOLVED, PER 100 DRIVERS

^rRevised from the previous report.

Results of the Second Offender Sanction Evaluations

<u>Total Accidents</u>: Among 1989 and 1991 second offenders, license suspension continued to be significantly more effective than treatment program plus restriction in reducing total accident risk (see Figures 13, 14, and 15, Tables 15 and 16), four years and two years subsequent to their convictions, respectively. The 1989 and 1991 suspended groups, with failure rates (per 100 drivers) of 14.60 and 7.78, respectively, had 20.1% and 21.6% fewer accident-involved drivers than did the SB 38 program groups. This finding is consistent with those of prior studies of second offenders on total accidents.

However, results of the 1992 analyses were similar to those of the 1990 and 1991 one-year analyses (reported in the previous two DUI-MIS evaluations) in that significant differences were not evident among second offenders in their total accident rates during the one-year follow-up period. Since license suspension has been consistently effective in reducing accident risk, it is likely that the lack of significant group differences in the one-year period is due to the immediate short-term positive effect of the imposition of one-year APS license suspensions on all second offenders. However, over a longer time period, the influence of APS on accidents for the SB 38 program participants may decline as licenses become reinstated.

In addition, Tables 14 and 15 show that on accidents across all years, first offenders had higher accident rates than did second offenders, which is a finding that has been apparent in previous DUI studies on accidents, even prior to DUI-MIS evaluations. The two-year comparison of the 1989 and 1991 analyses reported below indicates a significant difference between first and second offenders on accidents. The fact that second offenders have longer term sanctions than do first offenders (18-month postconviction suspension or 18-month SB 38 treatment programs) may explain this difference.

TABLE 15: SECOND OFFENDER SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF ACCIDENT- INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) GRP 1 - GRP 2 GRP 2	NUMBER OF DUI INCIDENT- INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) GRP 1 - GRP 2 GRP 2

Note: A significant (p < .03 for 1st offenders and p < .06 for 2nd offenders) difference between sanction groups relative to the proportion of accident-involved or DUI incident-involved drivers is represented by an "S". The group number with the 'S' indicates the group with the better (lower) rate. A nonsignificant difference is indicated by "ns". "na" means not applicable. Blanks appear in the lower half of each matrix, since the halves are identical.

<u>DUI Incidents</u>: Figures 13, 14, and 15 and Tables 15 and 16 show that in all three years, the suspended groups had significantly worse failure rates (by 22.7%, 42.9% and 46.8% for 1989, 1991 and 1992, respectively) than corresponding rates for the SB 38 program participants. The third group ("other") in the 1991 and 1992 analyses had failure rates

midway between the other two groups. Failure rates of all three groups were significantly different from each other. These findings are consistent with the results of prior studies on alcohol-related incidents showing that SB 38 programs with license restriction are associated with a reduction in subsequent DUI incidents.

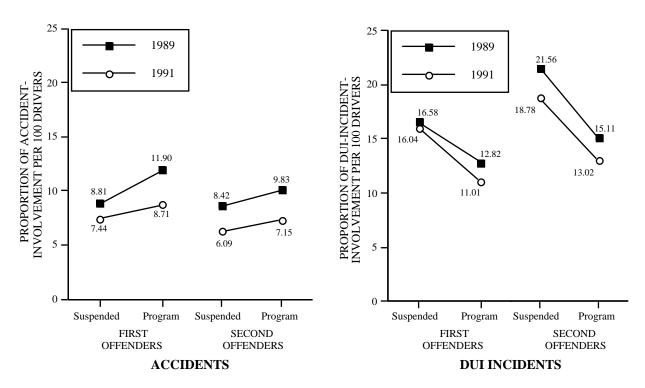

Results of the 1989-1991 Comparison of Two-Year Driving Records:

Total Accidents: The noticeable decline in accidents and DUI incidents in more recent years and the introduction of APS suspensions in July, 1990 warranted a further analysis testing for differences in driving records prior and subsequent to the implementation of APS suspensions. An analysis was conducted comparing the twoyear driving records of 1989 and 1991 offenders, in which first and second offenders were evaluated for differences in accidents and DUI incidents by year (1989 versus 1991) and by DUI offender status (first and second). Table 17 displays the results of this logistic regression analysis. It is evident from Table 17, and Figures 8 and 14, that 1989 first and second offenders had significantly higher proportions of drivers involved in accidents (10.81 and 9.17 per 100 drivers) than did 1991 first and second offenders (8.62 and 6.77 per 100 drivers). The relative probability of incurring an accident in 1989 versus 1991 showed that the 1989 first offenders were 1.3 times more likely to be accident involved than the 1991 first offenders (within two years following their conviction). Among second offenders, the odds of 1989 offenders incurring an accident were 1.4 times greater than for 1991 second offenders during the 2-year evaluation period. The magnitude of the accident reduction between 1989 and 1991 was greater for second offenders than for first offenders (statistically significant interaction between offender levels by year). As noted earlier, the second offenders in both years were significantly less involved in accidents than were first offenders, a finding that has been consistently shown in previous studies.

TABLE 17: ACCIDENT- AND DUI-INCIDENT INVOLVEMENT OF 1989 AND 1991 DUI OFFENDERS—TWO-YEAR SUBSEQUENT DRIVING RECORDS

YEAR	OFFENDER STATUS	SAMPLE SIZE	NUMBER OF ACCIDENT- INVOLVED PER 100 DRIVERS	ODDS RATIO OF ACCIDENT INVOLVEMENT 1989 1991	NUMBER OF DUI-INCIDENT- INVOLVED PER 100 DRIVERS	ODDS RATIO OF DUI INCIDENT INVOLVEMENT 1989 1991
1989	First offenders	(92,243)	10.81		14.07	
				1.30		1.29
1991	First offenders	(110,145)	8.62		11.20	
1989	Second offenders	(28,932)	9.17		16.33	
				1.40		1.09
1991	Second offenders	(38,801)	6.77		15.16	

However, the year by offender level analysis did not include the sanction dimension, and therefore, an additional in-depth analysis was conducted evaluating the effect of three factors and their respective interactions on the driving record-year, DUI offender status, and sanction type. The sanction groups were collapsed into suspended versus program groups (the three first offender program groups were combined). This analysis revealed that for first offenders, differences on accident involvement between 1989 and 1991 varied by type of sanction (see Figure 16). That is, the reduction in accidents was much greater for the 1991 program participants than it was for the 1991 suspended group, relative to their 1989 counterparts. Among first offenders, the suspended group in both 1989 and 1991 had relatively similar accident rates while the 1991 program group had a much lower accident rate than that of the 1989 program group. This finding provides evidence that APS had a greater impact on offenders assigned to treatment programs following conviction than it did on those who were suspended upon conviction. This finding provides support for the hypothesis that the combined use of suspension and treatment is superior to either alone.

<u>Figure 16</u>. Adjusted 2-year accident and DUI-incident rates for 1989 and 1991 first and second offenders by type of sanction.

The reduction in accidents for second offenders between the 1989 and 1991 program versus suspended groups was not as noticeable, but did approach significance (p = .087). The accident rates of both the 1991 suspended and program groups were significantly lower than their 1989 counterparts, but the extent of accident reduction was only slightly greater for the 1991 program group than it was for the 1991 suspended group. It appears that among second offenders, the effect of the APS suspension on treatment program participants diminishes in the second year, since the 1991 program group's accident rates were not appreciably different from those of the 1991 suspended group. Recall the discussion earlier suggesting that the impact of APS suspensions is more effective on accidents during the first year for second offenders but appears to diminish in the second year as licenses become reinstated. Since previous findings on accidents have supported license suspension as reducing total accident risk, the present findings indicate that the imposition of APS suspensions on all offenders had a greater short-term impact in reducing the accident rate of program participants than it did for postconviction suspendees.

DUI Incidents: Table 17 and Figures 11 and 14 show that both the 1989 first and second offenders had significantly higher DUI recidivism rates than their 1991 counterparts (14.07 and 16.33 for 1989, and 11.20 and 15.16 for 1991). The odds of being involved in a DUI incident were 1.29 times greater for the 1989 first offenders and 1.09 times greater for the 1989 second offenders than for 1991 first and second offenders. The odds of DUI-incident involvement in 1989 compared to 1991 for first offenders was significantly greater than the corresponding odds of second offenders, indicating that the reduction in DUI-incident rates was greater for 1991 first offenders than for 1991 second offenders. These differences in DUI-incident involvement were explored more extensively by analyzing sanction differences across both years and for both offender groups. Findings from this analysis revealed that, as was evident with accidents, first offenders in 1989 and 1991 varied in their DUI-incident rates by sanction group. In this case, 1991 first offender program participants showed a greater reduction in DUI-incident involvement than did the 1991 suspended offenders, relative to their respective 1989 groups. However, the outcome was different for second offenders in that, although both the 1991 suspended and program groups had lower DUI-incident rates than their 1989 counterparts, the extent of the reduction in DUI incidents was greater for the suspended group. These findings suggest that the imposition of APS suspensions increased the overall effectiveness of DUI sanctions in reducing DUI reoffense rates, but that the mechanism for the effect was different for first and second offenders. Since the pattern of interaction effects for second offenders was opposite that of first offenders and is somewhat counterintuitive, the causal impact of the APS suspension on the 1991 second offender reoffense rates must be interpreted with some caution. Under the hypothesis that was advanced in last year's report, one would predict that the APS suspension would have had a greater incremental impact in increasing the comparative effects on the second-offender treatment program group. This hypothesis proved correct when evaluated in terms of accident reduction, but the converse was true for two-year subsequent DUI incidents, where the suspended group showed a comparatively larger impact. Subsequent follow-up data and next year's analysis of 1992 second offender cohorts may clarify these relationships.

Based on the findings from the analyses described above, however, the reduction in overall accident involvement in 1991 for first and second offenders, and for DUI incidents among 1991 first offenders, may well be attributable to the implementation of APS suspensions in 1990. While other factors, such as the implementation of the .08% BAC law in 1990, the declining number of DUI arrests, and the California economic recession, may be associated with the decline in accidents and DUI incidents, these reductions should be evident across all sanction groups in order for these explanations to be plausible. The fact that the reductions were found to be significantly different by sanction groups indicates that the implementation of APS suspensions was a likelier factor in the lower accident and DUI reoffense rates of 1991 DUI offenders.

SECTION 5: ADMINISTRATIVE ACTIONS

Data on DMV administrative license disqualification actions (license suspension or revocation--S/R) taken in DUI cases are presented below. These statutorily mandated actions are initiated by the receipt of either a law enforcement APS report (.08% BAC or chemical test refusal) or court abstract of conviction. It should be noted that multiple actions can result from a single DUI incident--for example, a single DUI arrest frequently will result in both an APS suspension and a mandatory postconviction suspension action. This section includes the following tables and figure:

<u>Table 18: Mandatory DUI License Disqualification Actions, 1983-1993</u>. This table shows preconviction (APS) and postconviction license disqualification totals from 1983 through 1993. The postconviction totals include juvenile suspensions, first-offender suspensions, second-offender suspensions and revocations, and third- and fourth-offender revocations.

<u>Table 19: Administrative Per Se Process Measures.</u> This table presents APS process measure data for fiscal years 91/92 through 93/94.

Figure 17 graphically portrays mandatory DUI license disqualification totals from 1983 through 1993.

The following statements are based on the data shown in Tables 18-19 and Figure 17.

- During 1991, the first full calendar year of administrative per se license suspension, the total number of DMV DUI suspension/revocation actions increased by 60% over 1990. In 1992, the number of APS actions and total mandatory actions declined by 16% and 17%, respectively, mirroring the 16% decline in DUI arrests during the same period. This decline continued in 1993, with DUI arrests as well as mandatory license disqualification actions decreasing by 10% from 1992 totals.
- In 1993, 209,006 administrative per se license actions were taken. Of these actions, 69% were first-offender actions and 31% were repeat-offender actions.
- Chemical test refusal actions have steadily continued to decline, and have decreased by 50% since 1983.

- The number of mandatory postconviction license actions decreased by 14% in 1993.
- Since APS was implemented in July 1990, almost 1 million (992,736) APS suspension or revocation actions have been taken.
- During the first four years of APS implementation, requests for hearings have increased from 7% of all APS actions in FY 90/91 to 8% in 91/92, 9% in 92/93, and 10% in 93/94. The APS suspension/revocation action was upheld in 87% of hearings in FYs 90/91 and 91/92, 82% of 92/93 hearings, and 78% of 93/94 hearings.
- During the first 6 months after implementation (on January 1, 1994) of the "zero tolerance" law for minors, 4,331 suspension actions were taken.

1 A stion to long on the basis of a shaminal tool refusal on blood also had consentration (DAC) tool regult	<u> </u>	<u> </u>	,

¹Action taken on the basis of a chemical test refusal or blood alcohol concentration (BAC) test result.

^{2.08} refers to APS actions taken subsequent to obtaining evidence of a BAC equal to or in excess of the .08% per se level. Such an action is taken in conjunction with a DUI arrest.

³.01 refers to APS suspensions taken against drivers under the age of 21 with BACs in excess of .01%.

All entries in this category exclude actions later set aside but, where possible, include actions taken on the basis of either a chemical test refusal or a BAC test result.

⁵Prior DUI convictions consist of any such conviction where the violation occurred within the seven years prior to the current violation.

⁶This figure excludes subsequent departmental review hearings or procedures.

⁷In FY92/93 nine percent of total APS actions resulted in a hearing. This figure increased to 10% in FY93/94. Both numerator and denominator include those actions set aside as a result of the hearing.

 $^{^8}$ In FY92/93 the APS suspension or revocation was upheld in 82% of APS hearings held. This rate dropped to 73% in FY93/94.

APS chemical test refusal hearings represent 12% of the total APS hearings scheduled in FY92/93 and 11% of those in FY93/94.

¹⁰The APS action was sustained or upheld in 82% of the chemical test refusal hearings held in FY92/93 and 78% of those held in FY93/94.

SECTION 6: ACCIDENTS INVOLVING ALCOHOL

This section presents data on alcohol-involved accidents, as compiled and reported by the California Highway Patrol, as well as accident data which have been crosstabulated with Department of Justice DUI arrest data. Drivers identified as being under the influence of drugs other than alcohol are also included in the "alcohol-involved accident" category, but typically comprise less than 1% of the total (0% for 1992 data). This section includes the following tables:

<u>Table 20</u>: Race/Ethnicity by Sobriety Code of Accident-Involved 1992 DUI Arrestees. This table shows the law enforcement officer determination of sobriety for accident-involved 1992 DUI arrestees, by race/ethnicity.

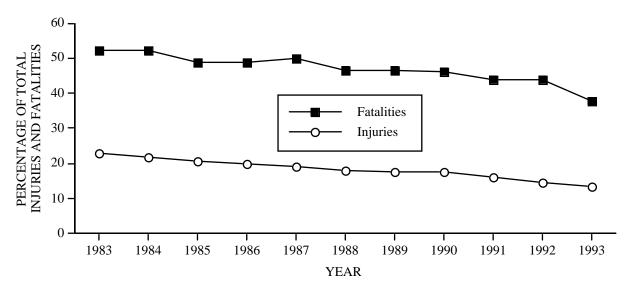

<u>Table 21: Fatal and Injury Accidents of 1992 DUI Arrestees by Race/Ethnicity and Type of Arrest</u>. This table portrays the fatal/injury accident involvement of DUI arrestees, by race/ethnicity and type of arrest (felony, juvenile, or misdemeanor).

<u>Table 22: Adjudication Status by Sobriety Code for Accident-Involved 1992 DUI Arrestees.</u> This table crosstabulates accident sobriety codes (from law enforcement accident reports) with the court disposition of the 1992 DUI arrests associated with those accidents.

<u>Table 23: Fatal and Injury Accidents of 1992 DUI Arrestees by Type of Arrest and Adjudication Status</u>. This table displays the adjudication status of fatal and injury accident-involved 1992 DUI arrestees, by type of arrest.

<u>Table 24: 1992 Accident-Involved DUI Arrestees With No Record of Conviction, by County and Type of Arrest.</u> This table shows the number of accident-involved 1992 DUI arrestees without a corresponding recorded conviction, by type of DUI arrest, by county.

Figure 18 (below) shows the annual percentages of traffic injuries and fatalities that were alcohol-involved from 1983 to 1993. The numerical data for this graph are shown on the DUI summary statistics sheet at the beginning of this report.

<u>Figure 18</u>. Percentage of total injuries and total fatalities that were alcohol-involved, 1983-1993.

Based on these data, the following statements can be made:

- The number of alcohol-involved traffic fatalities decreased by 14.4% in 1993, and has declined by 43% since 1987. The proportion of fatalities which are alcohol-involved has declined from 50.1% in 1987 to 37.7% in 1993.
- The proportion of traffic accident injuries that are alcohol-involved has also declined each year since 1987. Alcohol-involved injuries dropped 12.3% during 1993 and 37.6% from 1987 to 1993.
- 11.1% of all 1992 DUI arrests were associated with a reported traffic accident (the same as in 1991). 51.5% of these accidents involved an injury or fatality.
- In 29% of cases where a DUI offender was arrested in connection with a reported traffic accident, the offender has no record of any corresponding conviction. In 93% of these nonconvicted cases, the accident report indicated that the driver had been drinking and that their ability was impaired.
- Of all 1992 accident-involved DUI arrestees with no record of conviction, 33.1% had been arrested for felony DUI, up from 19.4% in 1991 and 18.2% in 1990.

- 5.7% (14,809) of DUI arrests were associated with a fatal or injury accident. Of these accidents, 30% (4,478) led to a citation for felony DUI but only 7% (1,089) led to a conviction of felony DUI. 30% (4,504) of DUI arrests stemming from a fatal/injury accident did not result in a reported conviction.
- Hispanic DUI arrestees in 1992, as in 1991, were proportionally less involved in fatal/injury and total arrest-related accidents than any other racial/ethnic group. For example, while Hispanics comprised 45.2% of all 1992 DUI arrests, they accounted for 42.1% of arrest-related accidents and only 39.3% of arrest-related fatal and injury accidents. In contrast, Whites (43.5% of 1992 arrests) accounted for 46% of total and 48.9% of fatal/injury arrest-related accidents. Corresponding rates for Blacks were 6.4% of arrests, 6.6% of total and 6.4% of fatal/injury arrest-related accidents, while "Other" races/ethnicities accounted for 5.0% of DUI arrests and 5.3% of total and fatal/injury arrest-related accidents.

^{*}These cases include only arrestees whose accidents showed alcohol or drug-impaired sobriety codes.

DATA SOURCES AND LIMITATIONS

DUI Arrest Data:

Arrest data are reported to the Department of Justice (DOJ), Law Enforcement Information Center, by individual law enforcement agencies throughout the state. As such, these data are subject to reporting errors such as incorrect names, birthdates or arrest dates. Nonreporting of arrest data due to error or omission can also occur; for example, in 1989 and 1991 the San Bernardino Police Department reported no DUI arrests, while reporting hundreds of DUI arrests in 1988, 1990, 1992 and 1993. When data are entered into DOJ's Monthly Arrest and Citation Register (MACR) system, only the highest-order offense is included. Therefore, in cases where a DUI arrest is made in conjunction with, for example, an auto theft arrest, that DUI arrest will not be included in the database. This results in systematic underreporting of the number of DUI arrests.

DUI Conviction Data:

Abstracts of conviction for DUI and other traffic-related offenses are reported to the Department of Motor Vehicles (DMV) by courts throughout the state. As abstracts are received (either hard copy, magnetic tape or through direct electronic access from the courts) they are entered onto the DMV driver record database. Abstracts without an identifying driver license number are run through the automated name index (ANI) system in order to match the abstract with an existing driver record; in cases where no such match can be made, an "X" numbered record is created to store the abstract. The total number of DUI abstracts of conviction received by DMV from the courts is tallied monthly and annually. Since this workload total includes abstracts which amend, correct or dismiss prior abstracts of conviction, it tends to overestimate the actual number of convictions which have occurred. Conviction data are also subject to reporting and nonreporting errors similar to those for DUI arrests. For example, the 1993 Annual Report of the California DUI Management Information System documented that thousands of DUI convictions showing in court records do not appear on the DMV driver record database.

Alcohol-Involved Accident Data:

Accident data are reported to the California Highway Patrol (CHP) by local law enforcement agencies and district offices of the CHP. As such, these data are subject to reporting and nonreporting errors similar to those occurring in both DUI arrest and conviction data. While most local law enforcement agencies will investigate and file reports on accidents involving injury or death, the investigation and reporting of property-damage-only accidents varies widely by local jurisdiction. Data are entered onto CHP's Statewide Integrated Traffic Records System (SWITRS) and output in annual published reports.

GLOSSARY

<u>ADMINISTRATIVE PER SE (APS)</u>

Administrative per se ("on-the-spot") license suspension or revocation occurs immediately pursuant to lawful arrest of a person driving with a blood alcohol concentration (BAC) of 0.08% or more, or one who refuses a chemical test. Upon arrest, the driver's license is immediately confiscated by the law enforcement officer and an order of suspension or revocation served. The driver is issued a temporary license and allowed due process through administrative review. In July 1990, California became the 28th state to implement APS. In January 1994, California enacted a "zero tolerance" statute which requires the administrative suspension of any driver under age 21 with a BAC of 0.01% or greater, or who refuses to be tested.

ALCOHOL-INVOLVED ACCIDENT

Alcohol-involved accidents are those in which the investigating law enforcement officer indicates on the accident report that the driver "had been drinking (HBD)." Accidents involving drivers who are determined to be under the influence of drugs other than alcohol (typically less than 1% of all accidents) are also included in the alcohol-involved accident category.

ALCOHOL-RELATED RECKLESS DRIVING

Commonly called a "wet" reckless, alcohol-related reckless driving refers to an arrest/conviction incident which originated as a DUI arrest. DUI arrests involving drugs which are reduced to reckless driving are also referred to as alcohol-involved or "wet" reckless driving. "Wet" reckless convictions count as priors for the purposes of enhanced penalties upon subsequent conviction of DUI.

ALPHA

Alpha is the investigator's acceptable risk or probability level of making a Type 1 error (generally chosen to be small--e.g., 1% or .01, 5% or .05). There is always some risk of a Type 1 error, so alpha cannot be zero. Alpha is also called the significance level, because it is the criterion for claiming statistical significance.

BAC

Blood alcohol concentration, or BAC, is a measure of the percent, by weight, of alcohol in a person's blood. Statutorily, BAC is based upon grams of alcohol per 100 milliliters of blood or per 210 liters of breath.

CONVICTION

Conviction of an offense, as used in this report, refers to the receipt by DMV of a court abstract of conviction. In a small proportion of cases, an offender may be convicted of an offense but that conviction is not reported to DMV. Such cases would functionally be treated by DMV as though the offender had not been convicted.

Because convictions can be amended, corrected, dismissed or simply not reported at all, the conviction totals reported herein are dynamic and subject to change.

COVARIATE

A variable used to statistically adjust the results of an analysis for differences (on that variable) existing among subjects prior to the comparison of treatment effects.

DUI

DUI is an acronym for "driving under the influence" of alcohol and/or drugs, a violation of Sections 23152 or 23153 of the California Vehicle Code.

LOGISTIC REGRESSION

Logistic regression analysis is a statistical procedure evaluating the linear relationship between various factors and the occurrence or nonoccurrence of an outcome event. In this study, the procedure was used to explain the relationship between the various sanctions and the proportion of DUI offenders who incurred accidents and/or DUI incidents.

MAJOR CONVICTION

Major convictions include primarily DUI convictions, but also reckless driving and hit-and-run convictions.

p stands for probability. For example, if p<.05, the probability is less than 5 chances in 100 that the difference you found is by chance alone.

QUASI-EXPERIMENTAL DESIGNS

Quasi-experimental designs refer to analyses where the comparison groups are not equivalent on characteristics other than the treatment conditions because random assignment was not used. Caution should be exercised when interpreting the results because of possible confounding of group bias with treatment effects. Covariates are used to statistically reduce group differences prior to the comparison of treatment effects.

SIGNIFICANT (STATISTICALLY)

If the result of a statistical test is significant, this means that the difference found is very unlikely by chance alone. <u>How</u> unlikely is determined by alpha.

APPENDIX A

Assembly Bill No. 757

CHAPTER 450

An act to add Section 1821 to the Vehicle Code. relating to driving offenses.

(Approved by Governor September 14, 1989. Filed with Secretary of State September 15, 1989.)

LEGISLATIVE COUNSEL'S DIGEST

AB 757, Friedman. Driving offenses: intervention programs: evaluation.

Under existing law, the Department of Motor Vehicles maintains records of driver's offenses reported by the courts. Including violations of the prohibitions against driving while under the influence of an alcoholic beverage, any drug, or both, driving with an excessive blood-alcohol concentration, or driving while addicted to any drug.

This bill would, additionally, require the department to establish and maintain a data and monitoring system, as specified, to evaluate the efficacy of intervention programs for persons convicted of those violations relating to alcohol and drugs, and to report thereon annually to the Legislature.

The bill would declare legislative findings.

The people of the State of California do enact as follows:

SECTION 1. The Legislature finds and declares as follows:

- (a) Drivers under the influence of drugs or alcohol continue to present a grave danger to the citizens of this state.
- (b) The Legislature has taken stern action to deter this crime and punish its offenders and has provided a range of sanctions available to the courts to use at their discretion.
- (c) No system exists to monitor and evaluate the efficacy of these measures or to determine the achievement of the Legislature's goals.
- (d) This lack of accurate and up-to-date comprehensive statistics hampers the ability of the Legislature to make informed and timely policy decisions.
- (e) It is essential that the Legislature acquire this information, from available resources, as soon as practicable, and that this information be updated and transmitted annually to the Legislature.
 - SEC. 2. Section 1821 is added to the Vehicle Code, to read:
- 1821: The department shall establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted of violations of Section 23152 or 23153.

The system may include a recidivism tracking system. The recidivism tracking system may include, but not be limited to, jail sentencing, license restriction, license suspension. Level I (first offender) and II (multiple offender) alcohol and drug education and treatment program assignment, alcohol and drug education treatment program readmission and dropout rates, adjudicating court, length of jail term, actual jail or alternative sentence served, type of treatment program assigned, actual program compliance status, subsequent accidents related to driving under the influence of alcohol or drugs, and subsequent convictions of violations of Section 23152 or 23153.

The department shall submit an annual report of its evaluations to the Legislature. The evaluations shall include a ranking of the relative efficacy of criminal penalties, other sanctions, and intervention programs and the various combinations thereof.
